1. Introduction

The Reserve Bank's [Exchange Settlement Account Policy](#) sets out eligibility criteria for Exchange Settlement Accounts (ESAs) and the application requirements. It also sets out policy in relation to real-time gross settlement (RTGS) agency arrangements. This paper outlines the eligibility criteria for using an RTGS agent, approvals for certain changes to agency arrangements, and the operational and contingency arrangements for dormant ESAs and ESA holders using an RTGS agent.¹

The RTGS agency policy aims to achieve a balance between the benefits to RITS participants of using an agency arrangement and the risks associated with tiering of settlements (particularly for high value transactions) in the payments system.²

The Reserve Bank requires Authorised Deposit-taking Institutions (ADIs) whose aggregate wholesale RTGS transactions (i.e. Austraclear, SWIFT PDS, and RITS cash transfers) equal or exceed 0.25 per cent of the total value of wholesale RTGS transactions to hold an ESA and settle all such transactions through their own ESA. ADIs below this threshold may apply to settle some or all of their wholesale RTGS transactions through an agent, rather than directly across their own ESA. Use of an agent for settlement in payments systems is often referred to as 'indirect settlement' or 'tier 2' participation.

ADIs with an ESA may choose to settle payments clearing obligations that are not wholesale RTGS transactions across their ESA, but are not required to do so. Such obligations may arise from card schemes, cheques, direct entry, NPP and property settlements.

An ADI that uses an agent for settlement of wholesale RTGS transactions may use its ESA to settle directly for other payments clearing systems. Alternatively, an ADI may wish to use an agent for some wholesale RTGS transactions but settle other wholesale RTGS transactions (and also non-wholesale RTGS transactions) through its own ESA. This allows the ESA holder to have control over some of its settlement obligations, and to hold a balance in its ESA³, but does not necessitate the ESA holder to invest in the operational infrastructure necessary to participate directly in wholesale RTGS payments. ADIs may also hold an ESA only to deposit funds, and not settle any payment system clearing obligations (wholesale or otherwise) across their ESA.

ADIs that are banks and that are below the 0.25 per cent threshold that do not wish to directly settle any payment clearing obligations or deposit funds may apply for a 'dormant' ESA as a contingency arrangement. Holders of dormant ESAs do not have direct access to their ESA, and the ESA would only be used in a contingency scenario where the RTGS agent is unable to settle RTGS transactions on behalf of the dormant ESA holder.

2. Eligibility and Monitoring

2.1 Clarification of 'agency' arrangements

For the purposes of this document, the Reserve Bank considers an RTGS agency arrangement to include:

- ¹ The permitted use of RTGS agency arrangements is subject to the ADI ESA holder meeting the eligibility, application and on-boarding requirements of the underlying payment system.
- ² For more information on tiering in payment systems, refer to: Arculus R, J Hancock & G Moran (2012) ['The Impact of Payment System Design on Tiering Incentives'](#), Research Discussion Paper 2012-06.
- ³ For example, some partially active ESA Holders may hold a balance in their ESA to satisfy APRA's High Quality Liquid Asset (HQLA) requirements.

- Formal agency arrangements, where an ADI has explicitly appointed another ADI to provide settlement services for one or more types of wholesale RTGS transactions; and
- Arrangements where an ADI has opened one or more commercial or corporate accounts with another ADI (not necessarily as part of a formal agency relationship), and those accounts can be used to process wholesale RTGS payments.

Where the term 'RTGS agent' is used in this document, it may refer to either of the above arrangements.

2.2 Eligibility for use of an RTGS agent

An ADI may settle some or all of its wholesale RTGS transactions through an RTGS agent (rather than directly across its own ESA) if the daily average of its wholesale RTGS transactions consistently accounts for less than 0.25 per cent of the total value of all wholesale RTGS transactions in RITS (refer to Section 2.3.1). Assessments against the 0.25 per cent threshold are made by the Reserve Bank.

Wholesale RTGS transactions comprise:

- interbank cash transfers in RITS (RITS cash transfers),
- interbank transactions arising from the Austraclear securities settlement system (e.g. the interbank settlement of wholesale debt securities and money market transactions), and
- payments made using the SWIFT Payment Delivery System (PDS)

that would settle across an ESA holder's own ESA if it did not use an RTGS agent (whether as part of a formal agency relationship or through a commercial/corporate account).⁴

Currently, settlements through the Fast Settlement Service (FSS) are not included in the calculation of the 0.25 per cent threshold.

2.3 Monitoring and approvals for RTGS agency arrangements

2.3.1 Monitoring of RTGS agency arrangements

The Reserve Bank monitors wholesale RTGS transactions being settled by ADIs via an RTGS agent. On the basis of this monitoring, the Reserve Bank assesses an ADI's share of wholesale RTGS payments and hence its continued eligibility to use an RTGS agent. If an ADI's wholesale RTGS transactions equal or exceed the threshold of 0.25 per cent of total wholesale RTGS transactions on a sustained basis,⁵ the Reserve Bank will require the ADI to put in place arrangements to settle all of its wholesale RTGS transactions across its own ESA (that is, to apply to hold an ESA or increase usage of its ESA). The ADI would then meet with the Reserve Bank to present a plan and indicative timetable to establish its own ESA operations (which may involve joining the SWIFT PDS and joining or changing its membership of the Austraclear system).

2.3.2 Approvals of changes to RTGS agency arrangements

- Existing ESA holders using their own ESA to settle all their wholesale RTGS transactions, if they wish to convert to using an RTGS agent for some or all of their wholesale RTGS transactions, must submit an application to the Reserve Bank.
- Existing ESA holders currently using an RTGS agent to settle some or all of their wholesale RTGS transactions, if they wish to change the use of their ESA (such as settling additional wholesale RTGS transaction types across their own ESA), must submit an application to the Reserve Bank.

⁴ ESA Holders that are central counterparties are not eligible to use an RTGS agent.

⁵ By way of example, three consecutive quarterly reports might be regarded as 'sustained', except in the presence of mitigating circumstances.

- Dormant ESA holders, if they wish to commence settlement across its ESA, including to facilitate deposit of funds, must submit an application to the Reserve Bank. The process is similar to that for applications for an active ESA.
- ESA applicants intending to use an RTGS agent to settle wholesale RTGS transactions must obtain approval from the Reserve Bank as part of the ESA application process.⁶
- ESA holders wishing to change their existing RTGS agent(s) must provide written notice to the Reserve Bank of the proposed change and provide any details as requested. The ESA holder must ensure the existing agency agreement is not terminated unless a substitute RTGS agent has been appointed or the Reserve Bank's approval has been received to cease using an RTGS agent.
- ESA holders intending to act as an RTGS agent for wholesale RTGS payments for the first time must seek prior approval from APRA (in the form of a non-objection) and from the Reserve Bank. Evidence of the APRA non-objection will need to be provided to the Reserve Bank.

3. Operational and Contingency Arrangements – Active ESA Holders

Active ESA holders are those that have any settlements across their ESA. Their ESA will have the branches and cash accounts necessary to effect settlement in those payments systems in which they are a direct settler, and the ESA holder will have users who are given login credentials and are able to access the RITS user interface to input, manage and monitor transactions across the ESA. The wholesale RTGS transactions that the ESA holder enters on its own behalf settle across its ESA; transactions that are settled by an RTGS agent settle across the ESA of the RTGS agent.

All active ESA holders must meet all the operational requirements for ESA holders operating their own ESAs as outlined in the [Exchange Settlement Account Policy](#) and as otherwise advised by the Reserve Bank (including, for example, having sufficient staff to monitor settlement activity across the ESA). ESA holders that use RITS only to deposit funds are only required to meet a subset of the operational requirements for ESA holders. All active ESA holders must also comply with the Reserve Bank's business continuity and security standards for RITS Members.

Active ESA holders that use an RTGS agent may need to effect contingency payments in the event that technical or other factors lead to their RTGS agent being unable to settle transactions on their behalf. As these ADIs operate their own ESAs, and have the capacity to input RITS cash transfers, they are responsible for any contingency payments. That is, in a contingency affecting its RTGS agent, the ESA holder is expected to have the capacity to directly settle transactions across its own ESA, and (unlike a dormant ESA holder) would not need the Reserve Bank to enter transactions into RITS on its behalf.

Active ESA holders, including those that use an RTGS agent, that are eligible⁷ can use the Reserve Bank's [Standing Facilities](#) as a source of liquidity for ESA settlements. Standing Facility Repos must settle across the ESA holder's own ESA, and not through the ESA of the RTGS agent(s). ESA holders that use RITS to only deposit funds will not normally be eligible to use the Reserve Bank's Standing Facilities.

4. Operational and Contingency Arrangements – Dormant ESA Holders

ADIs whose daily average aggregate wholesale RTGS transactions do not equal or exceed the threshold of 0.25 per cent of total wholesale RTGS transactions, and that elect not to settle clearing obligations or deposit

⁶ This includes ADI applicants that do not intend to settle payment obligations across their ESA.

⁷ Approvals for partially active ESA holders to use the Standing Facilities are granted on a case-by-case basis by the Reserve Bank's Domestic Markets department.

funds directly, may optionally maintain a dormant ESA as a contingency arrangement – that is, an ESA is created in RITS but remains inactive. A dormant ESA holder does not have access to its ESA.

The dormant ESA is only activated in a contingency, arising from technical or other factors that lead to the RTGS agent being unable to settle transactions on the dormant ESA holder's behalf. In such circumstances, and subject to the approval of the Reserve Bank in each instance, the Reserve Bank would perform the required settlement actions in RITS (as cash transfers) on behalf of the dormant ESA holder, across the dormant ESA holder's own ESA. The Reserve Bank would only act in each case on the ESA holder's authenticated ESA settlement instructions, and at its sole discretion.

In the event that the ESA is activated in a contingency, the dormant ESA holder would need to undertake all communications with its counterparties and (if applicable) its Austraclear custodian or participating bank.

Dormant ESA holders cannot use the Reserve Bank's *Standing Facilities* to access liquidity, except when the ESA is activated in the event of a contingency.

4.1 Required operational infrastructure

Dormant ESAs that are maintained in RITS are set up with the branches and cash accounts that are necessary to enable settlement at short notice in a contingency. However, dormant ESA holders do not have RITS users and are not provided with RITS login details, so they have no access to RITS.

To be able to send ESA settlement instructions to the Reserve Bank in a contingency (refer to section 4.2), dormant ESA holders must ensure that they maintain RITS Authorised Signatories and that contact information provided to the Reserve Bank is kept up to date. The Reserve Bank will confirm that these details are up to date during its routine checks with all Members of RITS.

4.2 Provision of ESA settlement instructions to the Reserve Bank

Dormant ESA holders must establish arrangements for provision of ESA settlement instructions to the Reserve Bank in the event of a contingency. Dormant ESA holders are required to test the procedures for providing contingency ESA settlement instructions to the Reserve Bank on an annual basis.

There are two methods by which a dormant ESA holder may provide ESA settlement instructions to the Reserve Bank for settlement across its ESA in a contingency: SWIFT messages and authenticated messages⁸. A separate ESA settlement instruction must be provided to the Reserve Bank for each wholesale RTGS transaction that the ESA holder wishes to settle across its ESA. Instructions will only be acted upon by the Reserve Bank after proper authentication.

Transactions involving the movement of stock in the Austraclear System would require separate instructions from the ESA holder to its custodian in respect of its transactions with either the Reserve Bank or other counterparties.⁹

4.2.1 Dormant ESA holders using SWIFT to send instructions to their agents

If the dormant ESA holder's usual means of providing wholesale RTGS payment instructions to its RTGS agent is by means of SWIFT messages, the ESA holder should provide ESA settlement instructions to the Reserve

⁸ Authenticated messages can be transmitted to the RBA by either email or fax.

⁹ Where the Reserve Bank is counterparty to transactions with the dormant ESA holder (e.g. for repo transactions), there would be a 'free of value' transfer of stock in Austraclear between the ESA holder or its custodian and the Reserve Bank, and a cash transfer in RITS from the Reserve Bank to the dormant ESA holder. If the Reserve Bank were not a counterparty, any transfers of stock would be between the dormant ESA holder or its custodian and the counterparty, and the movement of funds would be between the counterparty and the dormant ESA holder.

Bank by the same means. For this purpose, the dormant ESA holder must exchange SWIFT authorisations¹⁰ with the Reserve Bank before its ESA is opened, using the Reserve Bank's SWIFT address: RSBKAU2S, or such other address as notified by the Reserve Bank.

In sending its ESA settlement instructions to the Reserve Bank, the dormant ESA holder would normally use the BIC of the entity that signed the RITS Membership Agreement.¹¹ Alternatively, it can instruct the Reserve Bank to accept Settlement Instructions from a different BIC. The instruction to accept use of a different BIC must be signed in accordance with the method of signing specified on the ESA holder's most recent List of RITS Authorised Signatories form. Note that the ESA holder is not restricted as to what country it can send settlement instructions from.

Example ESA settlement instruction SWIFT messages are shown in Attachment 1.

4.2.2 Dormant ESA holders not using SWIFT to send instructions to their agents

If the dormant ESA holder does not send wholesale RTGS payment instructions to its RTGS agent using SWIFT, it must provide ESA settlement instructions to the Reserve Bank using authenticated messages. These messages must be signed in accordance with method of signing specified on the ESA holder's most recent RITS Authorised Signatories form and provided to the RITS Help Desk via email (rits@rba.gov.au) or submitted by fax (+ 61 2 9551 8063).

Each ESA settlement instruction sent by authenticated message must include a test key (code) generated by the dormant ESA holder using a spreadsheet provided by the Reserve Bank for this purpose.

4.2.3 Content of ESA settlement instructions

Each ESA settlement instruction to the Reserve Bank must include the following details:

- Settlement date.
- Amount.
- The name and RITS Code of the counterparty (i.e. the ESA holder from which the dormant ESA holder is receiving funds or to which it is paying funds).
- Whether it is a payment (debit) or a receipt (credit) for the dormant ESA holder.
- In the case of transactions involving the movement of stock in Austraclear where the Reserve Bank is the counterparty, the code of the ESA holder or its custodian in Austraclear, series ID, yield, deal price and face value, as applicable.¹²

5. Legal Arrangements

All ESA holders are required to sign a RITS Membership Agreement which binds them to the terms of the [RITS Regulations](#). The Membership Agreements of dormant and partially active ESA holders contain additional conditions of membership relating to the agency arrangements in Attachment A to the agreement. The additional conditions for dormant ESA holders also set out rules and indemnities for the provision of ESA settlement instructions to the Reserve Bank in a contingency.

¹⁰ Using the Relationship Management Application (RMA).

¹¹ Typically the BIC will be at the 8 digit level, indicating institution, country and region.

¹² In the case of other transactions in Austraclear (where the Reserve Bank is not the counterparty), trade details will need to be provided to the counterparty separately.
